

Application No. 10/042,195

Attorney Docket No. 040679/1417

**Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Previously Amended) An adaptive cruise control system for an automotive vehicle, comprising:

an inter-vehicle distance detecting section that detects a presence of a preceding vehicle which is traveling ahead of the vehicle and detects an inter-vehicle distance between the vehicle and the preceding vehicle;

a vehicular velocity detecting section that detects a velocity of at least one of the vehicle and the preceding vehicle;

a target inter-vehicle distance setting section that sets a target inter-vehicle distance on the basis of said velocity of at least one of the vehicle and the preceding vehicle;

a vehicular traveling speed controlling section that controls a traveling state of the vehicle on the basis of the detected inter-vehicle distance and the target inter-vehicle distance; and

a delay providing section that provides a delay for said velocity of at least one of the vehicle and the preceding vehicle, the delay provided detected velocity being used to set the target inter-vehicle distance, the target inter-vehicle distance setting section setting the target inter-vehicle distance on the basis of the detected velocity for which the delay is provided by the delay providing section.

2. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 1, wherein the delay providing section provides a dead time for said velocity of at least one of the vehicle and preceding vehicle used to set the target inter-vehicle distance.

Application No. 10/042,195

Attorney Docket No. 040679/1417

3. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 2, wherein the delay providing section provides a larger dead time for said velocity of at least one of the vehicle and preceding vehicle used to set the target inter-vehicle distance as either one of the velocity of the vehicle or the velocity of the preceding vehicle becomes smaller than the other.

4. (Previously Currently) An adaptive cruise control system for an automotive vehicle as claimed in claim 2, wherein the delay providing section carries out a low-pass filtering for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance if said velocity is equal to or lower than a predetermined value.

5. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 1, wherein the delay providing section carries out a low-pass filtering for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance.

6. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 5, wherein a time constant of the low-pass filter is set to become larger as said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance becomes lower.

7. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 5, wherein the delay providing section carries out a low-pass filtering for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance if said velocity is equal to or lower than a predetermined value.

Application No. 10/042,195

Attorney Docket No. 040679/1417

8. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 1, wherein the velocity detecting section comprises: a vehicular velocity detecting section that detects the velocity of the vehicle; and a preceding vehicle velocity detecting section that detects the velocity of the preceding vehicle on the basis of a relative velocity of the vehicle to the preceding vehicle and the velocity of the vehicle.

9. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 4, wherein the delay providing section provides a largest dead time for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance when either one of the velocity of the vehicle or the velocity of the preceding vehicle is equal to or lower than a first predetermined velocity value, provides a second largest dead time for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance when either one of the velocity of the vehicle or the velocity of the preceding vehicle is higher than the first predetermined velocity value but is equal to or lower than a second predetermined velocity value, provides a third largest dead time for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance when either one of the velocity of the vehicle or the velocity of the preceding vehicle is higher than the second predetermined velocity value but is equal to or lower than a third predetermined velocity value, provides a fourth largest dead time for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance when either one of the velocity of the vehicle or the velocity of the preceding vehicle is higher than the third predetermined velocity value but is equal to or lower than a fourth predetermined velocity value, and provides a fifth largest dead time for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance when either one of the velocity of the vehicle or the velocity of the preceding vehicle is higher than the fourth predetermined velocity value but is equal to or lower than a fifth predetermined velocity value.

Application No. 10/042,195

Attorney Docket No. 040679/1417

10. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 9, wherein the delay providing section provides a fifth control number of times previously detected velocity of the preceding vehicle  $V_{F5}$  for a detected velocity of the preceding vehicle  $V_{FF}$  used to set the target inter-vehicle distance when a presently detected velocity of the preceding vehicle  $V_F$  is equal to or lower than the first predetermined velocity value, provides a fourth control number of times previously detected velocity of the preceding vehicle  $V_{F4}$  for the detected velocity of the preceding vehicle  $V_{FF}$  used to set the target inter-vehicle distance when the presently detected velocity of the preceding vehicle  $V_F$  is higher than the first predetermined velocity value but is equal to or lower than the second predetermined velocity value, provides a third control number of times previously detected velocity of the preceding vehicle  $V_{F3}$  for the detected velocity of the preceding vehicle  $V_{FF}$  used to set the target inter-vehicle distance when the presently detected velocity of the preceding vehicle  $V_F$  is higher than the second predetermined velocity value but is equal to or lower than the third predetermined velocity value, provides a second control number of times previously detected velocity of the preceding vehicle  $V_{F2}$  for the detected velocity of the preceding vehicle  $V_{FF}$  used to set the target inter-vehicle distance when the presently detected velocity of the preceding vehicle  $V_F$  is higher than the third predetermined velocity value but is equal to or lower than the fourth predetermined velocity value, and provides a once control number of time previously detected preceding vehicle  $V_{F1}$  for the detected velocity of the preceding vehicle  $V_{FF}$  used to set the target inter-vehicle distance when the detected velocity of the preceding vehicle is higher than the fourth predetermined velocity value but is equal to or lower than the fifth predetermined velocity value.

11. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 10, wherein the target inter-vehicle distance setting section sets the target inter-vehicle distance  $D^*$  as follows:  $D^* = \alpha \cdot V_{FF} + \beta$ , wherein

Application No. 10/042,195

Attorney Docket No. 040679/1417

$V_{FF}$  denotes the detected velocity of the preceding vehicle for which the delay is processed,  $\alpha$  denotes a predetermined inter-vehicle time duration, and  $\beta$  denotes a predetermined distance at a time of a stop of the vehicle to reach to a position of the preceding vehicle and wherein the adaptive cruise control system further comprises: a difference value calculating section that calculates a difference of the set target inter-vehicle distance  $D^*$  from the detected inter-vehicle distance  $D$  as follows:  $\Delta D = D - D^*$ ; an inter-vehicle distance priority target acceleration/deceleration  $G_D$  as follows:  $G_D = F_1 \cdot \Delta D$ , wherein  $F_1$  denotes a predetermined feedback gain; a target vehicular velocity calculating section that calculates a target velocity of the vehicle  $V_c^*$  on the basis of a set vehicle speed  $V_s$ ; a vehicular velocity priority target acceleration/deceleration calculating section that calculates a vehicular velocity priority target acceleration/deceleration  $G_v$  on the basis of a difference between the target velocity of the vehicle  $V_c^*$  and the detected velocity of the vehicle  $V_c$ ; a target acceleration/deceleration calculating section that calculates a target acceleration/deceleration  $G^*$  on the basis of the target inter-vehicle distance priority acceleration/deceleration  $G_D$ , the vehicular velocity priority acceleration/deceleration  $G_v$ , and whether the inter-vehicle distance detecting section detects the presence of the preceding vehicle; and an acceleration controlling section that performs an acceleration control of the vehicle on the basis of the target acceleration/deceleration  $G^*$ .

12. (Previously Amended) An adaptive cruise control system for an automotive vehicle as claimed in claim 6, wherein the time constant  $T$  of the low-pass filter is set to give a maximum value  $T_0$  for the velocity of the vehicle used to set the target inter-vehicle distance when said velocity of the vehicle  $V_c$  is zero, is set to become smaller as the velocity of the vehicle  $V_c$  is increased, and is set to zero when the velocity of the vehicle  $V_c$  becomes equal to the predetermined value.

Application No. 10/042,195

Attorney Docket No. 040679/1417

13. (Previously Amended) An adaptive cruise control method for an automotive vehicle, comprising:

detecting a presence of a preceding vehicle which is traveling ahead of the vehicle;

detecting an inter-vehicle distance between the vehicle and the preceding vehicle;

detecting a velocity of at least one of the vehicle and the preceding vehicle;

controlling a traveling state of the vehicle on the basis of the detected inter-vehicle distance and a target inter-vehicle distance;

providing a delay for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance at a time of a detection of said velocity; and

setting the target inter-vehicle distance on the basis of said velocity of at least one of the vehicle and the preceding vehicle for which the delay is provided.

14. (Previously Amended) An adaptive cruise control system for an automotive vehicle, comprising:

inter-vehicle distance detecting means for detecting a presence of a preceding vehicle which is traveling ahead of the vehicle and detecting an inter-vehicle distance between the vehicle and the preceding vehicle;

vehicular velocity detecting means for detecting a velocity of at least one of the vehicle and the preceding vehicle;

target inter-vehicle distance setting means for setting a target inter-vehicle distance on the basis of said velocity of at least one of the vehicle and the preceding vehicle;

vehicular traveling speed controlling means for controlling a traveling state of the vehicle on the basis of the detected inter-vehicle distance and the target inter-vehicle distance; and

Application No. 10/042,195

Attorney Docket No. 040679/1417

delay providing means for providing a delay for said velocity of at least one of the vehicle and the preceding vehicle used to set the target inter-vehicle distance at a time of a detection of said velocity, the target inter-vehicle distance setting means setting the target inter-vehicle distance on the basis of said velocity for which the delay is provided by the delay providing means.
